Press Release

No. 2 / May 2026, Bangkok

Energy Efficiency In Construction:

The construction industry is entering a new era driven by energy efficiency and sustainable development. Amid growing challenges in energy consumption, environmental impact, and urbanization, smart building technologies, high-performance construction materials, energy management systems, and Net Zero Construction concepts are becoming key drivers in shaping the future of the built environment while enhancing long-term sustainability, cost efficiency, and quality of life.

Through the collaboration of leading industry partners including the Federation of Thai Industries (FTI), the Consulting Engineers Association of Thailand (CEAT), and the Thai Contractors Association under H.M. The King's Patronage (TCA), FutureBuild Asia 2026 will take place from 11–13 November 2026 at Bangkok International Trade & Exhibition Centre alongside R+T South East Asia and DOMOTEX South East Asia under the theme "Bridging - Professionals - Stakeholders - Technologies." The event will showcase the latest innovations and technologies in construction, including smart building solutions, energy-efficient systems, advanced construction materials, and future-ready infrastructure technologies from both local and international companies.

In addition, the event will serve as a major gathering point for construction industry professionals across Asia, bringing together designers, developers, investors, engineers, architects, contractors, project owners, consultants, real estate companies, and related businesses. Through conferences, knowledge-sharing sessions, networking activities, and business matching opportunities, FutureBuild Asia 2026 aims to foster collaboration, exchange ideas, and create new business opportunities for the region's construction and built environment industry.
